

BOMB DISPOSAL EQUIPMENTS

BOMB TROLLEY

Bomb trolley is a towing basket which can be taken anywhere by attaching to the vehicle. It's made up to withstand burst fire of AK-47 and SLR- 7.62 mm ammunition. It's made of bullet proof steel with suspension made of Kevlar aramid fabric inside so that object and bomb remains suspended.

BOMB TRUCK

System: Bomb truck is a double vented system (trailer and bomb basket), directs explosive forces upward. It withstands the blast of 60 percent gel dynamite without major delaminating and no penetration of transport cone that is affixed to trailer. Its Lightweight transport system easily towed by one person.

Trailer body: Bomb Truck is made of moulded fibreglass with protective gel coat surface. It has 4 wheels, independently coil suspended attached to trailer frame with no through axles, tubeless nylon, load range Tyres.

Trailer transport cone: it's made of a minimum of 40 laminations of non-fragmenting ballistic fibreglass built in a proprietary method of weave and laminations, measuring not less than 127 cms (50") across the top and built at a specified cone angle.

Cone is suspended from 4 upright non-fragmenting fibreglass stays a minimum of 2.54 cms (1") thick and 20.32 cms (8") wide by a minimum of 30,000 pound test nylon webbing or rope.

Trailer have a lifting device and anchoring mechanism made of tubular steel, with the capability of being moved in an arc parallel to the ground and have the capability of being operated from a distance of 30.5 m (100 feet) from the trailer body
